

ASSIGNMENT – 15

Problem Statement: Create a serverless computing service.

1. Sign-in to your AWS console.
2. Search for Lambda

Click on the first result named Lambda.

3. Now click on the Create Function button on the top right corner.

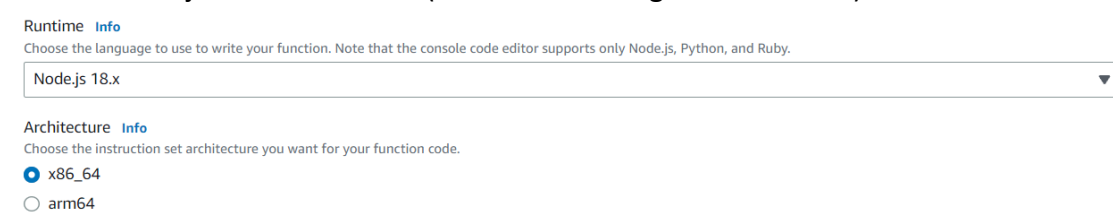

4. Select Author from scratch option.

5. Give the name of the function.

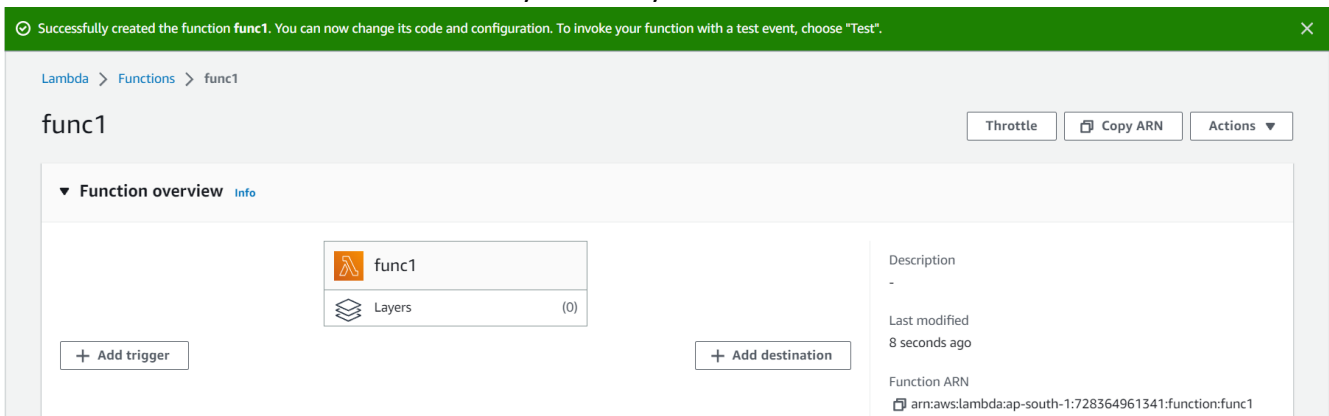

6. Choose Node.js as the Runtime. (No need to change architecture.)

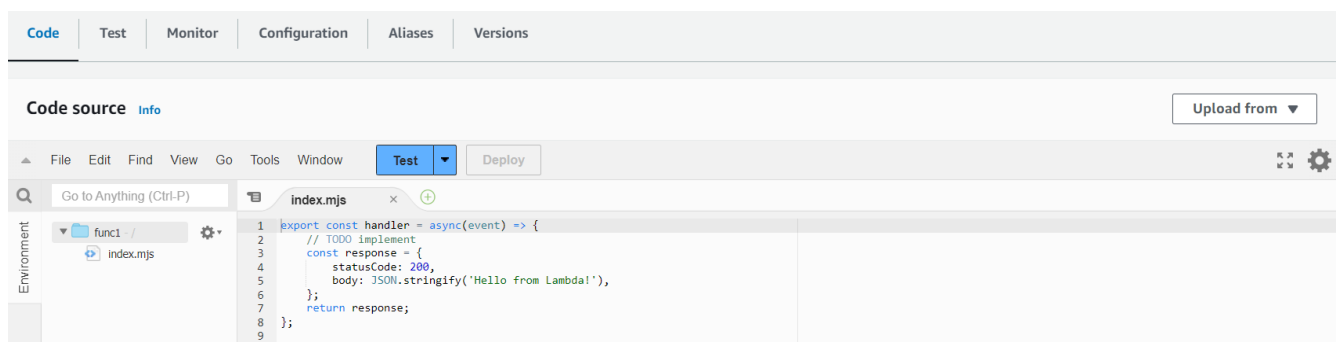

7. Now click on the create function button

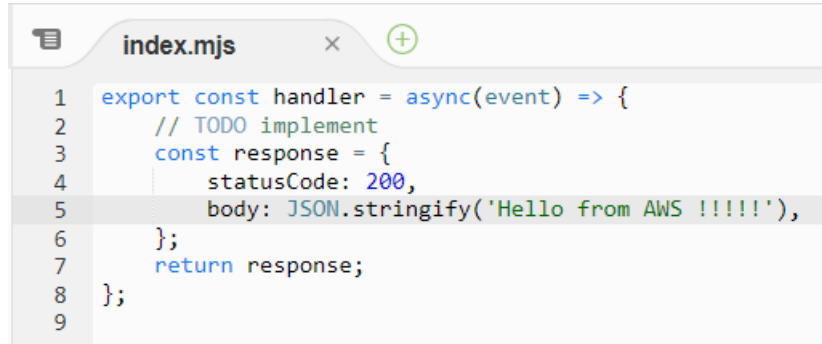

8. Now scroll-down to the code section of your newly created function.

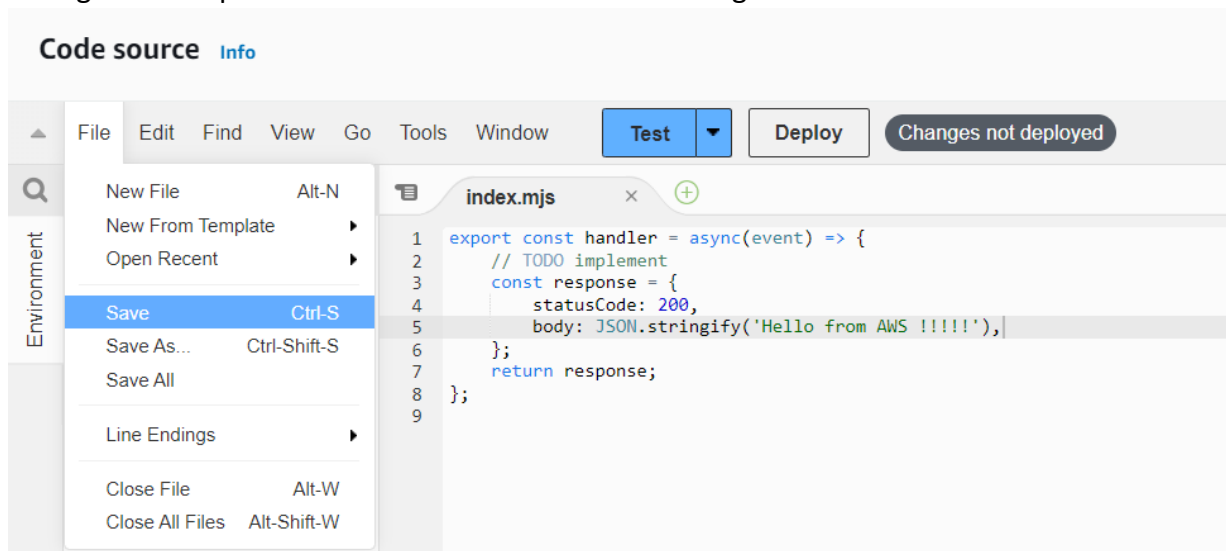

9. Change the string in the code to be displayed.

We changed it to this.....

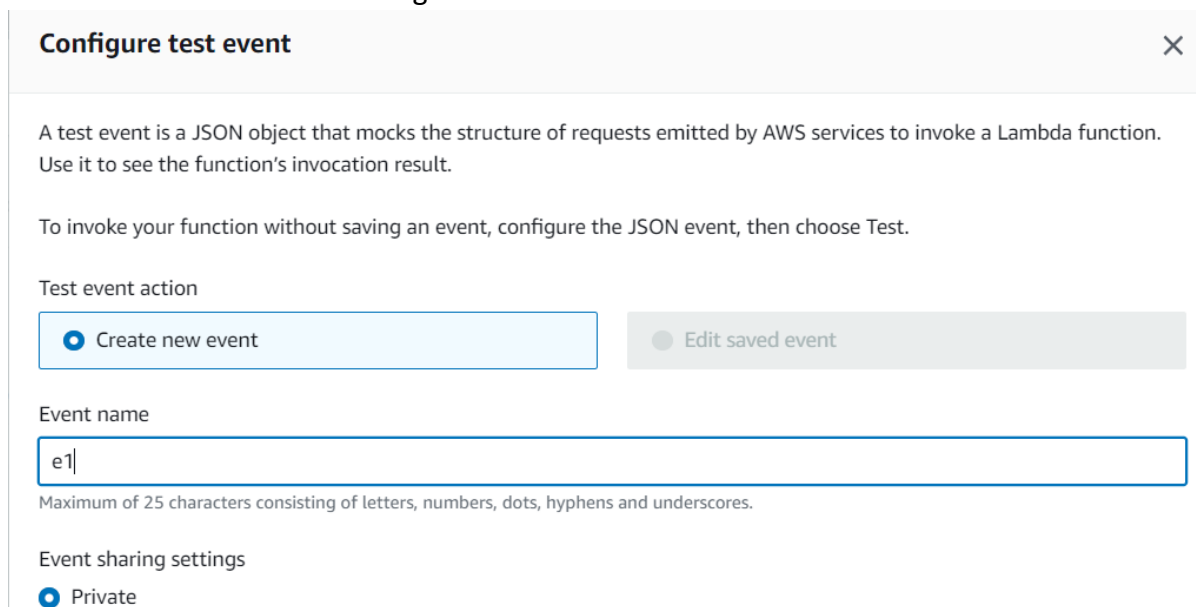

10. Now go to File option and click on save to save the changes.

11. Now click on the Test button.

12. Select Create New Event. Then give a name. Then click on save.

This event is only available in the Lambda console and to the event creator. You can configure a total of 10. [Learn more](#)

☐ Shareable

This event is available to IAM users within the same account who have permissions to access and use shareable events. [Learn more](#)

Template - optional

hello-world

Event JSON

Format JSON

Create function URL

No Function URL

No Function URL is configured.

Create function URL

18. Choose NONE and click on the save button.

The screenshot shows the 'Configure Function URL' dialog. At the top, it says 'Function URL' with an 'Info' link and a note: 'Use function URLs to assign HTTP(S) endpoints to your Lambda function.' Below this, under 'Auth type', there are two options: 'AWS_IAM' (unselected) and 'NONE' (selected). A note for 'NONE' states: 'Lambda won't perform IAM authentication on requests to your function URL. The URL endpoint will be public unless you implement your own authorization logic in your function.' A blue information box contains a warning: 'A policy exists that grants public access to your function URL. If you choose auth type NONE, anyone with the URL can access your function.' At the bottom, there is an 'Additional settings' section with a right-pointing arrow, and 'Cancel' and 'Save' buttons.

19. Now copy the newly created Function URL and paste it in a different browser.

The top part of the screenshot shows the 'Function overview' for 'func1'. It includes a description, last modified time (6 minutes ago), Function ARN, and Function URL. The Function URL is highlighted. Below this, a browser window is shown with the URL 'https://e2plgkbsn7pinv2obpnlmpwvcm0nkhke.lambda-url.ap-south-1.on.aws' and the output 'Hello from AWS !!!!!'.

We have successfully Created a Serverless Computing service.

To delete the Lambda Function, follow these steps:

1. Click on the Actions button on the top right side.

The screenshot shows the 'Function overview' for 'func1' in the AWS Lambda console. At the top right, there are buttons for 'Throttle', 'Copy ARN', and 'Actions'. The 'Actions' button is highlighted with a dropdown arrow.

2. Select the Delete function option and then click on delete button in the pop-up.
